

Club Cleaning Plan

- Provide a dedicated “Club Representative” whose responsibility is to ensure the safety of our Members by sanitizing frequently touched areas and equipment. Organizing our Club into zones, each Representative will have precise knowledge of the areas and equipment that have been sanitized, and those that will be sanitized next.
- Create conveniently located sanitation stations throughout exercise areas with touchless hand sanitizer and antiseptic disinfectant equipment wipes.
- Apply a long-lasting antimicrobial shield to high-touch objects and fitness equipment which is effective in killing 70+ strains of viruses, bacteria, mold, fungi and algae, and provides sustained antimicrobial protection for 30+days. Surfaces treated by this EPA approved and non-toxic solution will be identified by a **GREEN** sticker, providing assurance that it is protected against contamination.
- Nightly deep clean from our full-time Custodial Team, who will use EPA approved solutions to further clean and disinfect the Club.
- All Employees are an extension of our Custodial Team, with a heightened focus on sanitation and safety.
